

Tech Tips for iPad Content AirDrop

We want to help you as quickly as possible when you drop off work and pick up new learning materials. Following these “tech tips” will make your AirDrop quick and easy.

- Make sure the **iPad is charged**. (If the iPad is below 5% battery, we will likely have to keep it for a while to charge it before we can AirDrop to it.)
- Make sure the **iPad is ready to receive from “Everyone” in AirDrop** before you get to school.
 1. Place your finger at the top right corner of the iPad screen near the battery life indicator. Drag your finger toward the middle of the iPad screen to see a menu of items appear on the screen.
 2. Tap the circular AirDrop icon shown below in picture 2.
 3. Tap “Everyone” (picture 3) to make a check mark by it so that we will be able to locate the iPad in AirDrop.

School Goals

We wanted to extend an invitation to all parents to help our school achieve some goals. Each year we work to improve teaching and learning and all the systems that help our students learn and grow. Even though things are not how we wish they were this year, we are still here to do the same job, to help our students learn and grow the best ways we can. More this year than ever before, schools and families need to be a team.

The table below shows some data we have been collecting to see how our basic systems are functioning during the pandemic. As we learn more from feedback and observations, we improve whatever we can. Maintaining contact with our families and sharing learning materials and feedback are our first areas of focus.

Description	9/22/20	10/7/21	GOALS
Percentage of students that teachers/school staff cannot regularly communicate with or are hard to reach	9%	17%	0
Percentage of students that teachers have not been able to contact with for almost 2 weeks before data collection	3%	7%	0
Percentage of students who have received their materials for learning for the week before data collection	74%	78%	100%
Percentage of students who have turned in at least one assignment so far this school year.	39%	66%	100%

To help us reach these goals, parents and community members can remind and encourage each other, share feedback and ideas for improvement with school staff members, and communicate with school staff if there is any help we may be able to provide. For example, if you let your child’s teacher know if you are in quarantine, we have a safe way to exchange materials with you and AirDrop content to iPads from a safe distance outside your home. We can develop plans to work around any problems and work toward our goals.

We look forward to working together to increase learning opportunities during these challenging times.
